

About the NDIA DVC

The NDIA Delaware Valley Chapter consists of approximately 1300 members representing

leading organizations in the greater Philadelphia region that support the defense industrial base. The chapter is committed to support the programs and activities of NDIA, provide a means for communication with local government agencies, and encourage and facilitate the development of the national defense industrial base within the region. Our programs foster the exchange of information between industry and government with particular reference to national security.

Technology Center**

Friday, June 4, 2010

**200 Federal Street
Suite 300
Camden, NJ 08103**

Time: 8:00 AM

About the Event

About ACIN

The ACIN Technology Center is America's first small business accelerator dedicated to serving the US Department of Defense and Department of Homeland Security. Located in Camden, New Jersey and established in 2001 through a contract between the US Army and Drexel University, the mission of the ACIN Technology Center is to identify small businesses and technologies that make information delivery faster, more secure, and more flexible.

ACIN is focused on Applied Communications and Information Networking technology that provides benefits to the Department of Defense and Department of Homeland Security – either leveraging COTS technology or with the potential for commercial development.

The ACIN Technology Center is interested in for-profit technology firms producing products or services that can enter or grow in the government or commercial marketplace rapidly. Small businesses must involve telecommunications, wireless and mobile data applications, information assurance and network integrity, intelligent systems, or C4ISR technologies.
